

WSS3223

Product technical specification

WSS-3223 is a silicone surface additive for solvent-based coating systems, which slightly reduces surface tension and slip.

- Slightly reduce the surface tension of the coating system
- Very good thermal stability
- Has defoaming effect
- Contribute to the orientation of matting powder and aluminum powder

Recommended application , recommended dosage

Solvent-based system varnishes and paints

As supplied calculated on total formulation: 0.05 - 0.4 %

Technical data , chemical composition

Organosiloxane copolymer

- Appearance : transparent liquid
- Active matter content : 100%

Process Description

Pre-diluted or directly added as supplied

Packaging and storage stability

- 25 kg , plastic drum
- 200 kg , iron drum

Store in unopened original packaging and use within 12 months from the date of production .
